DP
1. (Currently Amended) A multi-line utility power transmission system comprising:  
a first power transmission line having a first impedance characteristic;  
a second power transmission line including a superconductor, in parallel with the first power transmission line, and having a second impedance characteristic less than the first impedance characteristic; and  
a power flow controller, coupled to the second power transmission line, for selectively regulating at least one of the magnitude and direction of the power flowing through the second power transmission line.
  2. Cancelled.
  3. (Previously Presented) The multi-line power transmission system of claim 1 wherein the superconductor is a cold-dielectric high temperature superconductor.
  4. (Original) The multi-line power transmission system of claim 3 wherein the high temperature superconductor is chosen from the group consisting of: thallium-barium-calcium-copper-oxide; bismuth-strontium-calcium-copper-oxide; mercury-barium-calcium-copper-oxide; and yttrium-barium-copper-oxide.
  5. (Original) The multi-line power transmission system of claim 3 further comprising a refrigeration system for cooling the high temperature superconductor at a temperature sufficiently low to exhibit superconducting characteristics.
